

Connecting to a Different OpenID Connect Provider

Brian Noyes

CTO, SOLLIANCE INC

@briannoyes www.briannoyes.com

Auth0

Security-as-a-Service

Paid cloud provider for identity

Similar capabilities as IdentityServer

Configure a tenant with client applications
and API resources

Module Overview

How to integrate with Auth0

Set up client apps, APIs, and users

Change Angular app client configuration

Integrating with Other OIDC Providers

**Required
configuration
varies from
provider to
provider**

**Major vendors
have their own
client libraries,
may be your best
choice**

**For this course:
sticking to oidc-
client**

Framework vs. Cloud Provider

IdentityServer:
Framework

Built-in UI

Auth0
Paid Service

Summary

Showed how to connect to Auth0

Client library considerations

Configure client apps, APIs, and users in Auth0 portal

Switched client configuration to Auth0

Worked out small differences in client configuration

Net takeaway:

- OpenID Connect and OAuth 2 standards make integration easy
- OpenID Connect standard is not excessively rigid
